Oleksandr Mruha

Full Stack Developer — React, TypeScript, Node.js, Python, AI Agents & LLM Integration

Kyiv, Ukraine (Remote) | omruga06@gmail.com | +380 67 296 3603 | linkedin.com/in/oleksandr-mruha | github.com/Reva1v | t.me/Reva1v

SUMMARY

Full Stack Developer with 2 years of commercial experience building production web applications, internal tools and Telegram bots end to end: React/TypeScript frontends, Node.js (Hono) and Python backends, PostgreSQL, Docker and CI/CD. Integrate LLMs and AI agents (Claude Code, Anthropic, Gemini, OpenAI) into real business workflows. Key results: Lander Desk, an agent platform that takes landing page tasks from ClickUp to verified production deploys; UNIC Adapter, a localization platform for 49 markets that cut deployment time from ~10 minutes to seconds; and a Telegram/Viber commerce bot that became a client's main sales channel with $25,000+ in monthly revenue.

SKILLS

Languages: TypeScript, JavaScript (ES6+), Python, Rust, SQL, HTML5, CSS3/SCSS

Frontend: React, Next.js, Redux Toolkit, Zustand, Tailwind CSS, Vite, Webpack, Storybook, PWA, responsive design; Tauri 2 (desktop)

Backend: Node.js, Hono, REST API, Axum, Tokio, aiogram, Flask, SQLAlchemy, Alembic, Zod, OAuth 2.0/OIDC, JWT, Puppeteer

Databases: PostgreSQL, Redis, Supabase, SQLite

AI / LLM: Google Gemini API, OpenAI API, Anthropic Claude API, AI agents (headless Claude Code, hooks, plugins, MCP), prompt engineering, multi-model pipelines; AI-assisted development (Cursor)

DevOps: Docker, Docker Compose, Nginx, GitLab CI/CD, GitHub Actions, Prometheus, Grafana, Linux, SSH, Vercel, Railway

Testing: Vitest, Playwright, pytest

Tools: Git, GitLab, GitHub, Bitbucket, Postman, Figma, ClickUp

EXPERIENCE

Full Stack Developer — UNIC Media Buying Agency Oct 2024 – Present

Full-time · Remote

Lander Desk — AI agent platform for landing page production

Tauri 2 · Rust (Tokio, Axum) · React · TypeScript · Node.js · Claude Code · Anthropic API · Playwright · Docker

- Built a system that takes a landing page task from a ClickUp card to a live, verified page registered in the Binom tracker: a Tauri desktop app (Rust core, React UI) and a headless server for Docker/Railway from the same Rust crate. ~91K lines of code, 1,800+ automated tests.
- Orchestrates parallel headless Claude Code agents, one per task, with recipes per task type, a custom Claude Code plugin (hooks, tools, review subagent), live logs and sessions that survive restarts; a second mode runs agents on the Anthropic API with budget tracking.
- Agents adapt and fix pages, strip third-party trackers and insert the order form. They then compare the result with the original in Chrome via Playwright at desktop, tablet and mobile widths. A fail-closed deploy gate requires proof for every item and green checks.
- Automated everything after deploy: live checks, Binom landing and offer setup, ClickUp field and status updates, plus a Telegram bot and Mini App for remote control. In its first 10 days it processed 68 tasks (390 work items), and 39 deploys ran with no manual steps.

UNIC Adapter — landing page localization and delivery platform

React 19 · TypeScript · Node.js · Hono · PostgreSQL · Gemini API · OIDC · Docker

- Built and own a self-hosted platform that localizes affiliate landing pages for 49 markets.

- Designed an AI adaptation pipeline on the Google Gemini API with parallel requests and API key rotation, plus an in-browser iframe editor for manual corrections.
- Replaced ~10-minute GitLab CI deployments with one-click publishing: DB-driven validation, then rsync over SSH to 6 production tracker servers, so pages go live in seconds.
- Implemented SSO via OIDC (Authentik) with group-based access and a PostgreSQL audit trail; set up Prometheus/Grafana monitoring with Telegram alerts; 280+ Vitest test files.

Other work

- Shipped smaller internal AI tools on the same stack (React, Hono, Gemini): a landing page generator from text briefs, an SEO article generator and a UI component library.
- Developed and optimized high-converting promo websites and landing pages (HTML5, SCSS, JavaScript, Tailwind CSS, jQuery) together with the media buying team.

Freelance Full Stack Developer Dec 2025 – Present
Contract · Remote

- **E-commerce bot platform** for a premium food retailer: Telegram (aiogram) and Viber (Flask) bots with catalog, cart, payments and admin panel on Supabase. Became the client's primary sales channel with $25,000+ in monthly revenue; order processing capacity up 200%.
- **Multi-tenant transport booking platform:** one Python codebase runs a separate Telegram bot for each carrier (tickets, parcels, tracking), Redis caching; companion React/TypeScript CRM with passenger analytics, manifests and route map.
- **Reply-time SLA bot:** tracks response times in work chats within working hours and escalates silence from manager to head to owner. Python, SQLAlchemy, Alembic, PostgreSQL, Anthropic and Gemini APIs, Docker, GitHub Actions CI/CD.
- **Website for a Kyiv print shop and gift store:** Next.js 16 (App Router), React 19, Supabase, next-intl, Vercel, Vitest and Playwright end-to-end tests.

PROJECTS

AI Content Generator for Google Business Profile
React · TypeScript · Vite · Gemini API · OpenAI API · Claude API · IndexedDB

Multi-model generator of SEO-optimized posts, product cards, service lists and business descriptions for Google Business Profile in any language.

HoldMix — Hold-a-Hotkey Volume Mixer for Windows github.com/Reva1v/HoldMix
Rust · Tauri 2 · windows-rs (Core Audio / WASAPI, WinRT) · React · TypeScript · Tailwind CSS

Open-source overlay mixer shown while a hotkey is held: per-app volume, ~30 fps peak meters, output switching, mic mute, media controls. Multi-threaded Rust backend, event-driven Core Audio updates, 50 ms from key press to rendered panel.

Restyle — AI Text Rewriter for Windows
Tauri (Rust) · React · TypeScript · Gemini / OpenAI / Anthropic APIs

Desktop app that rewrites the text you just typed in any input field on a hotkey, with a choice of LLM provider.

EDUCATION

State University of Information and Communication Technologies, Kyiv 2023 – 2027
Bachelor's degree, Information Systems and Technologies (in progress)

Binary Studio Academy — Frontend Development Program May 2025 – Aug 2025
Intensive course: TypeScript, React, Redux Toolkit, Webpack; hands-on projects with code reviews.
